

# Jack Spitzberg, M.D.; Charles Levin, M.D.; Martin Berk, M.D.; Tony Das, M.D., Kenneth Saland, M.D.

## CARDIOLOGY

CIVA physicians specialize in the diagnosis of cardiovascular disease using non-invasive technologies, such as nuclear, ultrasound, and 64-slice CT imaging. Precise, painless imaging allows our board-certified physicians to diagnose and treat cardiovascular diseases, such as coronary and carotid artery blockages, aneurysms, and atrial defects as an outpatient, without the need for surgical intervention. Cardiac rhythm disturbances are treated with the latest in device implants and catheter ablative techniques.

Dr. Jack Spitzberg specializes in general cardiology and hypertension. He graduated magna cum laude from Harvard and trained at Stanford University.

Dr. Charles Levin, valedictorian of his med-

ical school class, has been director of the Cardiac Catheterization Lab at Presbyterian Hospital since 1998.

Dr. Martin Berk practices general cardiology, and has extensive training in echocardiography and CT imaging. He is director of the Cardiovascular Research Institute of Dallas.

Dr. Tony Das, director of peripheral vascular interventions at Presbyterian Hospital, is a nationally recognized expert in new cardiovascular devices, and teaches complex vascular procedures to cardiologists from around the world.

Dr. Kenneth Saland received his cardiology training at Johns Hopkins University. He specializes in 64-slice CT imaging and complex coronary interventions.
